

LIVE ON SOLANA DEVNET · BUILT FOR SEEKER

Goldgrid

Pick five. Strike gold.

A free, provably fair number draw for Solana Seeker owners
— a new round every five minutes, prizes paid into your wallet
by themselves.

WHAT IT IS

A game that belongs on your phone **and** on the chain.

Free

No ticket price

You never pay to play — in any token. A paid entry would make it a lottery.

5 min

A round, always

Pick five of eighty-five. A fresh draw starts every five minutes, all day.

0 taps

to collect

Win and the prize lands in your wallet by itself. Nothing to claim.

WHY THIS IS HARD

Three things usually kill a draw app.

1

"Is it rigged?"

A draw you can't verify is a draw you can't trust. Most apps ask you to take the result on faith.

2

A paid draw is a lottery

Charge for a ticket and you are running a regulated lottery — a crime without a licence in most of the world.

3

Crypto friction

Signing, claiming, gas, "unknown token" — every step loses a player who just wanted to play.

THE LOOP

One round, four steps, under five minutes.

1

Pick five

Tap five numbers from 1 to 85 — or shake the phone for a quick pick.

2

Enter — free

One tap in your wallet. A tiny SOL deposit rides along and comes back after the draw.

3

The draw

Switchboard randomness on Solana turns over the winning five. Nobody picks them.

4

Get paid

Best match takes the pot, ties split it. The prize is already in your wallet.

The player signs once per round — the ticket. Everything after that happens without them.

PROVABLY FAIR

Nobody picks the numbers. Not even us.

Entries close

Tickets lock on-chain.
Nothing can be added
after this point.

Commit

Randomness is
committed only after
entries close, from a
fresh slot.

Reveal

Only the value from
that exact commit is
accepted. A re-roll is
refused.

Score & pay

Every ticket is scored
on-chain, winners paid,
deposits returned.

- ✓ A re-rolled value is refused by the program
- ✓ Every result links to its proof on Solana Explorer, in the app

MOBILE-NATIVE

The phone is the game, not a window to it.

Sign with the wallet you have

Mobile Wallet Adapter — enter with the wallet already on your phone, no extension, no seed phrase.

Shake to pick

A firm shake fills a random five — the quick pick, done the way a phone does it.

Results find you

A notification brings the outcome with the app closed — with its own sound and the winning row.

One Seeker, one ticket

On mainnet each ticket is tied to the Seeker Genesis Token, checked on-chain. One phone can't pose as a thousand wallets.

WHY SKR

Prizes in the Seeker's own token.

Why we chose it

It belongs to the players. Seeker owners already hold SKR, so a prize stays in the community that plays.

Free stays free. SKR is a prize, never a ticket price — so this is a game, not a bet.

The money is visible first. Sponsors fund the vault before anyone plays; every prize is backed on-chain.

What it unlocks next

Sponsored rounds — a brand funds a pot and its name sits on that round, in front of every Seeker.

Featured draws — a bigger pot for a launch day or a weekend.

Partner prizes — a sponsor's own token paid alongside SKR.

On devnet the prize is Test SKR, a valueless stand-in. On mainnet the same program is set up with the real SKR mint.

STICKINESS

Built to be opened again in five minutes.

5 min

A fresh round, always minutes away. There is always a reason to come back right now.

+1

ticket for every 7 rounds played in a row, up to 5 — a streak you earn, never buy.

Ping

A notification for each result and for the next round pulls players back — even with the app closed.

And every round has a winner whenever anyone matches — the best match wins, not only a perfect five — so a session almost always pays off in minutes, and the activity tab keeps the full history.

UNDER THE HOOD

On-chain, permissionless, audited.

No server of ours

Commit, reveal, scoring and payout are permissionless. A crank runs them on GitHub Actions with a key that holds no authority — and anyone can run another.

One Anchor program

Rust on Solana, Switchboard on-demand randomness, both SPL Token and Token-2022. Prizes are real on-chain transfers.

Audited, tested on-chain

A full audit, 15 findings fixed — including a draw re-roll — and redeployed under a new program id. Security tests pass live on devnet.

Android: Kotlin + Jetpack Compose · Program id `gvd3fv3QgWvTMzLfxN2HBKkspAeVwzGBCZkW9ixaucM` · Source-available under BUSL 1.1

WHERE IT STANDS TODAY

Not a mockup — a working app.

- ✓ The whole round runs live on Solana devnet — enter, draw, automatic payout, notification.
- ✓ Proven on a real Android device with a real wallet, not an emulator.
- ✓ A signed release APK, ready for judges to install.
- ✓ Every result provable on Solana Explorer, and the draw keeps running with no computer of ours on.

WHAT'S NEXT

From devnet demo to a live Seeker game.

NOW

Devnet demo

The full game, free, provably fair, with a signed APK and the automatic draw — everything in this deck.

MAINNET

Real Seeker, real SKR

Seeker Genesis Token gating turned on, a sponsored SKR pot, and the dApp Store release.

GROW

A sponsor platform

Branded rounds, featured draws and partner-token prizes — a reason for projects to reach every Seeker.

GOLDGRID

Pick five. Strike gold.

Install it on a Seeker, pick five, and watch the next round pay out by itself — it starts in a few minutes.
